General Bibliography – Volume XIV. AAQ Archives de l'Archidiocèse de Québec. AC Archives Civiles. The General Bibliography is based on the sources which are most frequently cited, usually in abbreviated form, in the individual bibliographies of volume XIV. It is not intended to provide a comprehensive listing of background materials for the history of Canada in the late 19th and early 20th centuries. Prince Edward Island is much smaller (only about 45 km², 17 sq mi) and lies some 12 nm (19 km) to the northeast. Prince Edward Island is located at 46°38′39″S, 37°56′36″E. At the Von Zinderen Bakker Peak northwest of the center, it reaches a height of 672 meters (2,204 ft). There are a few offshore rocks along the northern coast, like Ship Rock (100 meters, 330 ft, north of northernmost point) and Ross Rocks (500 meters, 1650 ft, from the shore). A nautical mile or sea mile is a unit of length. The island group is about 955 nm (1770 km) south-east of Port Elizabeth in mainland South Africa. This bibliography serves only as a general guide and entry point into the vast historiography of Victorian sciences. Many of the individual pages in the Victorian Web history science contain particular bibliographies. A few primary materials are below. Secondary sources, History of science reference sources, by Doug Stewart. Ackerknecht, Erwin. Medicine at the Paris Hospital, 1794-1848. 1967. Allen, D.E. The naturalist in Britain: a social history London, 1976.
